David Brockman: On March 30th of 2019, I had a traumatic accident. I ended up being flown, actually, to UC Davis for surgery. They found out that, it was beyond repair and that they had to amputate my hand from the wrist down. I actually have, a rod that's specially made for me so I can actually hook onto it. My surgeon that I had, he got me in touch with a Dr. Schofield. He works with PhD students on engineering projects, and some of those students want to do prosthesis. Federal funding, if used correctly, is extremely important. My first myoelectric, which is my hand prosthetic, would not have been available to me without funding. Without that money, these schools can't do that and give people a chance to see what is possible.
